CS student with production experience shipping full-stack, AI-powered features to 200+ real users; comfortable owning work end-to-end from schema design to deployment and testing.

EDUCATION

B.M.S. College of Engineering

Pursuing B.E in Computer Science

Nov 2022 - Aug 2026

CGPA: 8.8

EXPERIENCE

Platform Development Intern, Seedling Labs

Jan 2026 – Jul 2026

Technologies: FastAPI, React Native, AWS Bedrock, Gemini, Alembic, Docker, Playwright, TypeScript

- **Sprout Platform:** Developed AI-powered educational suite (Lesson Plan Generator, Auto-Grader, Question Paper/Worksheet Generator, YouTube Transcript Analyzer) adopted by 200+ teachers with active users across 2 schools.
- Personally automated **500** of the **8,000+** test cases delivered in TypeScript using **Playwright** for an external client while contributing to Sprout; leveraged Claude Playwright MCP for intelligent website exploration and test automation.
- Shipped **4 production-level features** for Sprout end-to-end: LaTeX rendering pipeline, YouTube Transcript Analyzer, teacher dashboards, and hash-set prompt engineering optimization.
- Optimized LLM system prompts using subject-based hash sets, reducing token usage; Built YouTube Transcript Analyzer on **Gemini Flash**, sizing 30-min videos (~20k tokens) to fit its 200k context window without RAG.
- Ramped up independently on an unfamiliar AWS Bedrock and Alembic stack, then owned schema migrations end-to-end across dev→staging→prod, plus API versioning, Grafana monitoring, and Docker containerization.

Project-based Learning Intern, Sigma-Aldrich

July 2025 – Aug 2025

Technologies: Gemini, Llama 3, Firebase, Model Fine-tuning, Firebase Cloud Functions

- Developed **Sahayak**, a web app helping teachers explain concepts using local analogies and cultural context; leveraged **Gemini's multimodal capabilities** and fine-tuned **Llama 3-8B** on curated Indian history/geography data.
- Deployed all backend functions as **Firebase Cloud Functions** with regional language support (Hindi, Marathi, Kannada, Tamil) to improve engagement for rural teachers. [Github link](#)

PROJECTS

HireOn | *React Native, FastAPI, PostgreSQL, Azure, Vercel, LLM-powered Automation* | [Live Demo](#) Feb 2026 – Mar 2026

- **Capstone project:** AI-powered hiring automation platform for end-to-end recruitment — resume parsing, LLM-based candidate scoring, interview workflow generation, and automated communication pipelines. Demoed to company leadership including CEO and CTO.
- Designed **Kanban-style hiring pipeline** and an **intelligent interviewer dashboard** generating role-specific question banks from job requirements and candidate strengths/weaknesses.
- Architected scalable backend using **FastAPI** and **PostgreSQL**, deployed on **Azure** (backend) and **Vercel** (frontend).

BillBear.me | *HTML, CSS, JavaScript, Flask, Redis* | [Live Demo](#) | [Github](#)

Nov 2025 – Dec 2025

- **Team project (led development):** Collaborative bill-splitting app – user scans a bill to start a session, diners join via QR code and select items they ordered; **Redis-backed** sessions compute per-person splits from actual items claimed, removing manual reconciliation.

TECHNICAL SKILLS

Languages : Python, TypeScript, JavaScript, Java

Frameworks / Tools : FastAPI, Flask, React Native, Docker, Playwright

Databases : PostgreSQL, MongoDB, Firebase, Redis

Certification : [Coursera Machine Learning Specialization](#)
